ipConfigure Continues to Secure Harbor Wholesale Grocery

Harbor Wholesale Grocery continues to expand with ipConfigure

Norfolk, VA 4.25.09 - Harbor Wholesale Grocery, which specializes in providing full service grocery to convenience stores, small grocery stores, coffee stands, and restaurants in Washington and Northwest Oregon, continues to expand its ipConfigure surveillance solution by adding more and more cameras to its system. Since its original purchase of ipConfigure's software in September of 2007, Harbor Wholesale has more than quadrupled its camera count.

ipConfigure utilizes open database standards offering its customers, such as Harbor Wholesale, extreme scalability. The ESM software is capable of supporting an unlimited number of cameras, buildings, and users. This means that adding cameras and locations to an existing ipConfigure surveillance system is made quick and simple; ultimately making it easy for customers surveillance systems to expand and grow along with its security needs.

With over 300 employees, Harbor Wholesale's surveillance system needs to be reliable and efficient. Real-time information about camera, switch, and server status is provided for the

system administrator so that any problems can be fixed quickly and before any serious problem occurs. Securing video connections through SSL encryption, ipConfigure restricts access and provides a secure connection between cameras, servers, and client interfaces.

With a strong emphasis on customer retention and satisfaction, ipConfigure is pleased to have Harbor Wholesale continue to grow its IP-based surveillance system with ESM leading the team.

About ipConfigure:

ipConfigure is the industry's leading software developer focused on scalable IP video management software. ESM 4.5, a solution that is both intuitive and scalable, is the company's fourth generation enterprise IP video surveillance application. ESM 4.5 features an increased functionality and a highly intuitive user interface. The surveillance software is designed to manage and record IP based video surveillance while supporting unlimited cameras, locations, and users.
