

Club One Casino Makes a High Definition Bet on ipConfigure's Enterprise Surveillance Manager

ipConfigure announced today that Club One Casino has installed its flagship product Enterprise Surveillance Manager to secure its patrons and property in downtown Fresno, California.

Norfolk VA ([PRWEB](#)) May 4, 2010 -- ipConfigure announced today that Club One Casino has installed its flagship product Enterprise Surveillance Manager to secure its patrons and property in downtown Fresno, California.

Since new gaming regulation in California requires that every card on the table be identifiable in surveillance video, Club One decided to deploy HD resolution Axis IP cameras throughout the table gaming areas. ipConfigure's ESM supports high definition recording without affecting the live cameras views which can be throttled down to preserve bandwidth. ESM provides the flexibility of viewing live cameras and reviewing archive video from any location on-site or off-site without the need of proprietary software through its browser based user interface.

Installing an enterprise class video management surveillance solution can be challenging, especially when you consider the complexity of configuring servers, network switches and cameras; however, Chee Lee from Club One Casino stated that, "The support team from ipConfigure was very helpful with the installation process. All the cameras are up and running in no time and have very impressive quality". Club One's system is slated to grow to over 100 cameras by the end of the year.

"We are seeing more and more casinos install IP video solution with high definition cameras throughout the country. ESM is a great bet for casinos because it breaks them out of using proprietary systems by enabling them to install our software on commercial off-the-shelf hardware," said Christopher Uiterwyk, CEO and President of ipConfigure.

About ipConfigure

Founded in 2003, ipConfigure is a privately owned video surveillance software company and a leading developer of enterprise IP video surveillance solutions. ipConfigure's core products, Surveillance Manager Basic (SMB) and Enterprise Surveillance Manager (ESM) with License Plate Recognition are available as software only solutions or preinstalled on a Video Surveillance Appliance. All solutions are capable of supporting unlimited cameras, locations and users through a unified browser-based interface.
